Reviewer overall recommendation

Considering the proposal as a whole, do you think FSC should fund this project as a worthwhile contribution to the skills ecosystem?

Overall Recommendation:

- I recommend this project for funding
- I recommend this project for funding conditional on changes and/or more information
- I do not recommend this project for funding

Explain your reasoning for this recommendation.

The project is very clearly aligned with the goals of the grant call. There is broad reaching impact that will clearly change the face of health care in a long -term and systemic way. The organization and the collaborations that have abounded are meant to get in front of a number of key issues that are could have negative and unintended consequences if we do not address DEI in health care and increasing reliance on AI and technologies overall.

What do you think are the strongest aspects of this project?

The project has many great aspects but I would say...

1. This project further advances innovative workplace education by building diverse skills and capabilities, accelerating the appropriate and equitable adoption of AI technologies, and delivering better, more accessible healthcare for Canadians. - This opening really captures the essence of the work and the knowledge dissemination that has abounded.

2. This statement really resonates with me: "...provide better and safer care to patients and work towards making healthcare more sustainable." AI if not checked can have adverse impacts, which should be mitigated early before wide spread adopt and harm is inadvertently cause. This is a mitigation strategy that we must look about at there is urgency and appetite for deeper work for diverse population in AI reality.

3. "...develop systemic change enablers by fostering unique collaborations and engagement across the healthcare ecosystem, bringing together healthcare providers, leaders, researchers, industry partners and AI experts, and building partnerships that will allow healthcare organizations and providers to be more agile and coordinated in responding to this transformational change". Mic drop. I think this is a very strong aspect to the proposal that makes me wonder if it is feasible. However, we cannot pass up the opportunity to have this work at minimum contemplated and at best executed fully as the proposal describes. This point makes the proposal infallible.

Where do you think the project has gaps or challenges?

There is a proprietary nature to what is being done? Maybe more of this context is in the initial proposal. How is that being protected and commodified and what is the long term strategy, if any, for continued knowledge dissemination and sector uptake?

Also, I am wondering if more information could have been provided in the EDI section of the proposal. Community partners seems to be broad terminology. This may have been discussed in the first proposal but I will give the applicant the benefit of the doubt that are adequate community based relationships.

It would have been good to provide a bit more insights on the playbook and how it will remain relevant and current overtime.

Comments

Proposal was well written and thoughtful.
